The WhoDunit Report in Angel Learning

The WhoDunit report is a report that allows you to look at your entire class related to different search elements. This allows you to easily identify students who have not logged in or have not submitted assignments for two weeks or any length of time that you specify in your report.

For example, you can quickly

- identify who has or has not logged into your class within a specified time
- who has or has not scored a certain percent on any of your graded assignments
- who has or has not submitted any one of your assignments
- who has or has not completed an item

To run these reports, do the following:

1. Log into your course
2. Click on the Report link
3. Under Category, set the category to WhoDunit by clicking on the down arrow.

4. Under the report down arrow select the report that will yield you the information that you want. Then adjust your Configure your report and the last down arrow (if need) to identify the specific assignment, you want to check. Also under the Select Report view, click on the down arrow to get a table. (The table format is much easier to read). In the example below, I wanted to know which students have not submitted any posts to my Learning styles forum.
5. The last thing that you need to do is click the Run button to create the table with a list of students. You can also click the send mail button to send an e-mail to all students who are identified in the table. The e-mail is sent through the BCC (students will not see the names of other students). Don’t forget to click on the send to internet e-mail, so that students who may not be logging into Angel get your reminder sent to their internet address as well as inside of Angel.

6. Don’t forget to click on the send to internet e-mail, so that students who may not be logging into Angel get your reminder sent to their internet address as well as inside of Angel.
